

Physeometric Prediction Data Cloud © Christopher G Brown 551

a group of servers or information structure that houses a secluded or open system of predictions for the information that bases it's self on predictive measures of experimental operations with or with-out committing to the real and holding virtual attempts in their system

energy signal wave measures in scales of negative and minus as well as positive may be used in any predictive computational data analytic such as to say that with a known and given there could be any such physeometric prediction of applied science with the gradual in-ate chemical building squares of medicine and any other essential things in any quantity or sum
