

the factors are pin pointed and then the estimation is understood that the possibilites are taken to the highest denomination.

$$A + M2 = E (30.666666666666667 \ 736/24) \approx A E/M2 \approx B E^3/C^4 \approx C (E \uparrow)/(C \uparrow)$$

Essence and total sums (a backwards undertaking of all things considered.)

final tally equation main up possible to high notes (the importance is to make shure the target is known.)
